The mission of the Michigan Institute for Clinical and Health Research (MICHRI) is to enable and enhance clinical and translational research by educating, funding, connecting, and supporting research teams at the University of Michigan and the surrounding communities. MICHRI’s Education and Mentoring Core (EMC) provides multidisciplinary learning opportunities aimed at increasing the number of high-quality clinical and translational researchers across a broad career spectrum. Examples include:

**Enrichment Programs**

- MICHRI Research Education Symposium
- Introduction to Clinical and Health Research for Emerging Investigators
- K-Award Writing Workshop
- Mentoring Forum
- MICHRI Mock Study Section
- Start Here: Navigating the Regulatory Environment at U-M
- Scientific Writing Series
- Basics of Clinical Research for Study Coordinators

**Degree, and Certificate Programs**

**Translational Research Education Certificate (TREC):** In partnership with the Program in Biomedical Sciences, the goal of the 18-credit-hour certificate program is to increase and enhance the training of doctoral students enrolled in basic biomedical programs by generating interest in clinical and translational research careers.

**Executive Master’s in Clinical Research Design & Statistical Analysis:** The School of Public Health Biostatistics Program offers an Executive Masters for practicing clinicians. This is a convenient way to learn research design and statistical analysis at an advanced level over 18 months. MICHRI offers a 6-credit mentored research track in which participants design a study, generate pilot data, and write an initial draft of a scientific paper.

**Practice-oriented Research Training (PORT):** PORT is a didactic and experiential mentored research training program that provides allied health professionals the fundamental skills to design a research project, to apply and be reviewed for funding, to conduct research, and to present and publish findings.

**Post-terminal Degree Programs**

**Postdoctoral Translational Scholars Program (PTSP):** The PTSP is a multidisciplinary career development award designed to prepare individuals with a PhD in a biomedical science or social science discipline for careers in translational research. This competitive 2-year program provides a mentored research experience and the opportunity to pursue a clinical immersion experience, as well as educational offerings in regulatory matters, clinical research methods, research ethics, biostatistics and/or specialty electives.

**MICHRI K Scholars Program:** The Mentored Clinical Scientists Career Development (MICHRI K) award is a competitive 2-year program that provides protected time for clinicians to focus on conducting clinical research. Participants develop competency in study design, translational teamwork, scientific communication, the responsible conduct of research, statistics, and mentoring.
