

2021 MICHIGAN MEDICINE AND VA ANN ARBOR HEALTHCARE SYSTEM POSTDOCTORAL CONSORTIUM IN CLINICAL NEUROPSYCHOLOGY

Six positions anticipated beginning in September 2021

- **3 Adult Positions at Michigan Medicine**
- **2 Adult Positions at VA Ann Arbor Healthcare System**
- **1 Pediatric Position at Michigan Medicine**

Application Deadline: December 1, 2020

Submission of materials is done electronically at the following website:
<https://medicine.umich.edu/dept/psychiatry/education/psychology-postdoctoral-training/how-apply>

**ACCREDITED BY THE COMMISSION ON ACCREDITATION
AND THE AMERICAN PSYCHOLOGICAL ASSOCIATION**

The University of Michigan, as an equal opportunity/affirmative action employer, complies with all applicable federal and state laws regarding nondiscrimination and affirmative action. The University of Michigan is committed to a policy of equal opportunity for all persons and does not discriminate on the basis of race, color, national origin, age, marital status, sex, sexual orientation, gender identity, gender expression, disability, religion, height, weight, or veteran status in employment, educational programs and activities, and admissions

Michigan Medicine/VAAHS Consortium

Michigan Medicine and the VA Ann Arbor Healthcare System (VAAHS) have combined to form a network of training programs that provide rich interdisciplinary training environments in multiple specialty areas. The Network Training Director is J. Todd Arnedt, Ph.D. and the Neuropsychology Program Training Directors are Kristen Votruba, Ph.D. ABPP-CN (Michigan Medicine) and Robert Spencer, Ph.D. (VAAHS). The Neuropsychology consortium is accredited for specialty training by the American Psychological Association (APA).

The neuropsychology program adheres to a scientist-practitioner model with a mission of contributing to the development of competent clinical psychologists with a specialization in neuropsychology and preparing residents for board certification in Clinical Neuropsychology through the American Board of Clinical Neuropsychology (ABCN) in conjunction with the American Board of Professional Psychology (ABPP). The program complies with training guidelines of Division 40 of the APA and the Houston Conference.

The program selects candidates whose academic and clinical preparation, supervisor recommendations, and perceived synergy with our program are ideally suited. In turn, the training program provides a breadth of experiences in assessment, research, education, and professional development. Clinical training occurs in a multidisciplinary setting with specialized research emphasis for each resident. The program develops professionals with the specialty training necessary to accurately assess, diagnose, and recommend effective intervention to a broad range of individuals with CNS impairment. Our program also prepares residents to direct clinical programs, educate clinical neuropsychologists, and initiate and carry out programmatic research. Opportunities to participate in faculty members' research and further develop research skills and a programmatic focus are available in the areas of adult neuromedical disorders, neurodegenerative disorders, mood disorders, geriatrics, traumatic brain injury, and pediatric neuromedical disorders.

Residents in the Clinical Neuropsychology specialty complete a two-year program. Satisfactory completion of the residency requires at least 22 months of active participation with final certification by the Network Training Committee. The average residency stipend is \$51,688 with generous health benefits for the first year, and continued benefits and increases in stipends for the second year. Residents also receive paid vacation, conference time, and some financial support for professional development.

While we were one of the founding members of the Association of Postdoctoral Programs in Clinical Neuropsychology (APPCN), we will not be participating in the 2021 match. For 2021-2023, the Michigan Medicine/VAAHS consortium in neuropsychology will be recruiting six clinical neuropsychology residents for the following positions:

- **3 Adult Positions at Michigan Medicine**
 - Adult Neuromedical (1 position) and Geriatric/Dementia (2 positions)
- **2 Adult Positions at VAAHS**
- **1 Pediatric Position at Michigan Medicine**

Michigan Medicine Neuropsychology Site

The Neuropsychology Program, under the direction of Carol Persad, Ph.D., ABPP-CN, has a rich tradition in the measurement of cognitive and behavioral characteristics of diverse patient groups and a close working relationship with other investigators in a number of departments, including Psychiatry, Neurology, Radiology, Pediatrics, Anesthesiology, Oncology, Physical Medicine & Rehabilitation, Surgery, and Internal Medicine, as well as other Medical Center programs and other University units, such as the schools of Nursing, Public Health, and Engineering and the Institute of Social Research. The Neuropsychology Program plays an integral role in many clinical research studies and clinical trials. The Program evaluates more than 3000 patients annually based on referrals for neuropsychological sequelae associated with general medical and neurological conditions, dementia, pre-surgical evaluations, mood disorders, and neurodevelopmental and learning/attention problems. The program also completes numerous research-based evaluations for investigators in the Neuropsychology Program and Department of Psychiatry, as well as for researchers throughout the medical center and through contracts with industry. In response to the COVID-19 pandemic, the Neuropsychology Program has initiated empirically-supported Teleneuropsychology services, which are offered in combination with hybrid and in-person services, based on specific patient needs. Faculty, postdoctoral residents, and staff are involved in the development and evaluation of these services through programmatic research.

Michigan Medicine Facilities

The Michigan Medicine Neuropsychology Program is housed in over 3,000 square feet at the Commonwealth Building located between the main medical center and the East Ann Arbor medical campus. The Program currently includes 15 faculty members (8 Board Certified in Clinical Neuropsychology), 13 masters level psychologists, 7 postdoctoral residents, research assistants, and other students and trainees. Our facility is equipped with modern psychological test instruments and computers for measurement of psychological and psychophysiological behaviors, including the latest computer-based testing devices. The laboratory facility includes sets of adjacent rooms separated by a one-way mirror for patient observation and video and sound equipment for patient monitoring, a large research area for mobility and driving simulator studies, a computer laboratory for imaging studies, and three conference rooms equipped with video-conferencing capabilities. Fourteen testing rooms are housed in the Program, along with other open laboratory space and faculty, trainee, and staff offices. Permanent satellite evaluation rooms are also located at the inpatient psychiatric unit at University Hospital, Rachel Upjohn Building / Ambulatory Psychiatry, the Michigan Clinical Research Unit, and the Michigan Medicine Med Inn. The Michigan Alzheimer's Disease Research Center (MADRC) is also located in the Commonwealth Building and shares many of the Neuropsychology Program facilities and research space. All postdoctoral residents have individual offices with desktop computers at the Commonwealth Building.

VAAHS Neuropsychology Site

The VAAHS Neuropsychology Section has a long history of evaluating Veterans in acute and long-term care inpatient settings, outpatient clinics, and rehabilitation units. The Section has a major role in the diagnosis and evaluation of medical, neurological, and psychiatric conditions which affect cognitive and personality changes. The Section is widely integrated into research investigating the interaction between medical disease and injury, cognitive and personality changes in Veterans, and the early detection and non-pharmacologic treatment of cognitive and behavioral impairment. In recent years this research has included studies of the effects of drugs on cognition, the influence of normal aging vs. neurological disease, interactions between depression and cognition, the role of motivation in neuropsychological test performance, and interactive effects of PTSD and mild head injury. Additional ongoing federally-funded studies investigate the behavioral and neuroanatomical impact of cognitively oriented treatments (e.g., cognitive rehabilitation, cognitive training) and non-invasive brain stimulation in older adults with cognitive impairment, using novel neuroimaging modalities. The VAAHS currently employs four post-doctoral residents in Clinical Neuropsychology.

VAAHS Facilities

VA Ann Arbor Hospital is a general medical and surgical hospital in Ann Arbor, MI, with 142 beds, serving Veterans from Southeastern Michigan and Northern Ohio. It is accredited by the Commission on Accreditation of Rehabilitation Facilities (CARF). It provides the full range of inpatient and outpatient services, including neurology, neurosurgery, and geriatric internal medicine in addition to other medical and surgical services. Facilities are newly updated in most areas, including Mental Health, Outpatient, and Nursing Home facilities. Offices for neuropsychology residents are at our Packard Road location with modern support facilities, full computer access to the Michigan Medicine information systems and library, as well as VAAHS information systems.

Unique patients in fiscal year (FY) 2019 (FY19) were 69,686 with over 610,000 outpatient visits. Now an estimated 7.5% of VA care is for female Veterans nationally, with the number steadily growing. The representation of women in the Afghanistan-Iraq (OEF/OIF) veteran cohort is dramatically greater than for any previous conflict. There is predominance of Vietnam-era Veterans by era of service, but 26% of our unique patients are age 54 or younger. Facility Aggregate Reports through the 4th Quarter of FY18 show VAAHS as ranking high among high complexity facilities in combined quality domains of access, clinical performance, and patient satisfaction.

Education

Residents in the Michigan Medicine/VAAHS Consortium in Clinical Neuropsychology have several unique learning opportunities, ranging from targeted coursework to visiting lectures. Educational offerings include both mandatory training requirements to ensure consistent progress through the training program, and optional training opportunities that can be pursued to enrich the training experience to the extent that time is available.

Required:

- **Michigan Medicine Didactic and Journal Club (weekly):** This offering is a mix of didactic training and case conferences with a fact-finding format; Sample topics have included Movement Disorders, Degenerative Conditions, Multiple Sclerosis, Epilepsy/Wada, Pediatric Neuroimaging, Cerebrovascular Disease, Toxin Exposure, Developmental disorders (i.e., ADHD, LD), Aphasias, and more.
- **Michigan Alzheimer's Disease Research (MADRC) Center Clinical Pathological Correlation (once every other month):** This seminar integrates the neurological examination, clinical presentation, neuropsychological test results, and post-mortem histopathological findings of participants seen in the MADRC. When offered, this conference takes the place of MM Journal Club for the week.
- **Cross-cultural seminar (monthly for second year residents):** This seminar is primarily done in case conference format, and includes video participation from Aristotle University of Thessaloniki, Greece, Chukwuemeka Odumegwu Ojukwu University – Igbariam Campus in Nigeria, Makerere University in Uganda, Michigan State University in Lansing, MI, Vytautas Magnus University in Lithuania, and the Norwegian University of Science and Technology.
- **Grand Rounds in Psychiatry and/or Neurology (weekly):** Residents can choose from neurology or psychiatry rounds each week.
- **Professional Development Seminar (weekly for first year residents; monthly for second year residents):** This seminar is designed to increase interaction with psychology postdocs outside the neuropsychology section and provide lectures on topics ranging from legal/ethical issues, negotiating a job, giving a job talk, private/forensic practice, and work/life balance.
- **Neuroanatomy lecture and wet lab (audited class taken through University of Michigan Graduate School; first semester of second year of program):** This class provides training in neuroanatomy and “hands-on” experience designed to improve the understanding of brain-behavior relationships and to provide preparation for the clinical neuropsychology written board examination.
- **Staff Meeting (weekly at Michigan Medicine; monthly at VAAHS)**
- **Bioethics Conference (twice per year)**

Optional opportunities in accordance with training goals and as time permits:

- Weekly VAAHS Case Conference: This conference is in conjunction with the Clinical Psychology Internship Program at the VA Healthcare System
- Neuropathology Conference (Brain autopsies)
- Neuroimaging Meetings / Neuroradiological Conference
- Refractory Epilepsy Conference
- Michigan Alzheimer's Disease Research Center's Consensus Conference (biweekly multi-disciplinary diagnostic meeting)
- Department specific conferences (Surgery, Psychiatry/Depression Center, Internal Medicine, Cardiology, Radiology, Oncology, and Institute of Gerontology)
- VAAHS Geriatric Research Education and Clinical Center (GRECC): This meeting includes an interdisciplinary clinical case conference and GRECC research conference
- Diversity, Equity, and Inclusion Opportunities
 - *Psychiatry Department Diversity, Equity, and Inclusion Series*: This series includes monthly "Lunch and Learns". Recent examples include Working with Transgender People Across the Lifespan, COVID-19 Disparities and Underlying Causes, The Impacts of Race on Psychological Wellbeing, Cultural Humility, Discussion of Disability/Ability, Ways to Be a Better Ally in the Workplace, etc. When possible, these offerings take the place of part of MM Journal Club for the week.
 - *Psychiatry Department and Neuropsychology Section DEI committees*: Several workgroups have been developed including those that focus on (1) Clinical work, (2) Research, (3) Education, (4) Workplace Environment, and (5) Community Outreach
 - *Psychiatry DEI Retreat*: Annual offering through the Psychiatry department
 - *DEI Certificate Program*: This program is open to University of Michigan graduate students and postdoctoral fellows and is designed to prepare individuals to work in diverse environments while fostering a climate of inclusivity.

Teaching / Supervision Experiences

Residents have the opportunity to perform tiered clinical supervision of pre-doctoral practicum students and interns. Additional supervision of undergraduate students who work with faculty and residents on a wide variety of research projects is also available. In addition, residents may also provide assistance in teaching seminars with faculty members or teaching lectures to current medical students and residents.

Adult Neuropsychology - Clinical Training Experiences

Clinical training experiences comprise approximately 50% of the resident's time

Michigan Medicine

General Neuropsychology Clinic: Adult neuropsychology residents conduct 3-4 outpatient evaluations per week for adult and geriatric patients with a wide array of presenting cognitive, emotional, and behavioral conditions. A psychometrist model is used for the majority of assessments, with the resident responsible for interviewing, interpreting data, writing clinical reports, and providing feedback. Residents are expected to average 3-4 clinic cases per week (with a psychometrist). Throughout training, residents demonstrate psychological assessment and interview skills by completing neuropsychological screens of patients being considered for bariatric surgery. Residents may also see cases from geriatric psychiatry that primarily involve differentiating neurodegenerative diseases from psychological disorders. Residents also provide inpatient consultation on a rotating basis. Services are provided in-person, via virtual (video/phone), or hybrid modalities.

Postdoctoral residents regularly staff interdisciplinary clinics with medical residents and attending staff. Required experiences for Michigan Medicine residents include Cognitive Disorders Clinic and Epilepsy Clinic. Additionally, all Michigan Medicine residents complete a 4-month rotation that involves assessment of pediatric patients. These clinic experiences include integration of neuropsychological assessment data with neurological and medical evaluations and discussion of the case along with teaching by attending staff.

Primary Clinic Experiences:

Cognitive Disorders Clinic: This weekly clinic in neurology evaluates cognitive difficulties that can occur with aging. It provides diagnosis and comprehensive management of patients with memory loss and disorders of higher cognitive function and dementia. Neuropsychology residents observe neurological examinations and provide consultation about patients' neuropsychological evaluation to the treatment team.

Epilepsy Program: The University of Michigan Adult and Pediatric Epilepsy Programs are a collaborative relationship with the Department of Neurology and Department of Neurosurgery and are recognized by the National Association of Epilepsy Centers (NAEC) as a Level 4 Certified Epilepsy Center, the highest certification available from the NAEC. Both adult and pediatric programs see patients for treatment of epilepsy, and in cases where treatments have failed, patients are evaluated for consideration of surgical relief of their seizure disorder. Each patient under consideration for surgery participates in a thorough evaluation in the Comprehensive Epilepsy Program, which includes EEGs, brain imaging (MRI, PET, SPECT), speech and language assessment, social work, neuropsychological evaluation, and potentially Wada and fMRI procedures. Approximately 70-100 epilepsy surgeries are conducted per year. This rotation follows a lifespan model and has the following aims: 1) Pre-surgical neuropsychological evaluation to assess functional brain status, assist in the lateralization and localization of seizure focus, assess for any psychiatric issues, and establish a baseline, 2) Assess language

lateralization and unilateral memory functions following an injection of Brevital (Wada Procedure), and 3) Post-surgical neuropsychological evaluation to evaluate change over time and provide recommendations. Residents on this rotation will also attend the weekly multidisciplinary Refractory Epilepsy Conference.

Pediatric Clinics: To ensure lifespan training, adult residents will complete a 4-month rotation conducting pediatric assessments. During this rotation, they will participate in the ASD and ADHD multidisciplinary clinics. These outpatient clinics are responsible for the diagnosis and treatment of children with suspected autism spectrum disorders and attention-deficit/hyperactivity disorder as well as common psychiatric comorbidities. Observational opportunities may also be available in the Epilepsy, General Neurology, and the Hematology/Oncology Clinics.

Optional Clinic Experiences: Residents have the opportunity to gain experience in other Neuropsychology Program-supported clinics, including the Neurosport Clinic, the Movement Disorder Clinic, and several clinics at the VAAHS (e.g., Community Living Center, Polytrauma/TBI Clinic, Substance Abuse Clinic, Post Traumatic Clinic).

VA Ann Arbor Healthcare System

General Neuropsychology Clinic: Services are provided throughout the hospital and on the outpatient service. Referrals vary from assessment for cognitive change related to conditions such as epilepsy, head trauma, substance abuse, ADHD, neurodegenerative diseases, chronic health conditions, and psychiatric disorders. Referral sources include Ambulatory Medicine, Psychiatry, and Neurology services. Residents are responsible for selecting and administering neuropsychological tests, interviewing, interpreting, writing clinical reports, providing feedback, and consulting with referring providers. Over the two-year training period, residents typically progress from primarily testing their own cases to a mixture of psychometrist and self-administered evaluations. Second year residents are also actively involved in pre/post deep brain stimulation (DBS) evaluations.

Primary Clinic Experiences: Some experiences are only available to second year residents.

VAAHS Polytrauma Clinic: This clinic primarily evaluates Veterans returning from recent theatres of action in the Middle East as well as other areas of conflict. Among more common questions for referral are concerns about cognitive and emotional effects of mild head injury, cognitive and affective correlates of post-traumatic stress disorder, and cognitive and personality changes associated with other sources of service-related physical and emotional traumas. Residents provide consultation-liaison services within the clinic, working closely with Physical Medicine & Rehabilitation, social work, and speech and language providers to deliver brief screenings of cognitive performance and symptom validity, as well as full evaluations for appropriate cases. Residents may also have the opportunity to provide psychoeducation regarding head injury to patients and their caregivers and to follow Polytrauma Clinic veterans in individual therapy. Clinic data are also available for frequent use in related institution-approved research projects.

Geriatric Medicine Clinic: The neuropsychology service is integrated into the VAAHS Geriatric Medicine Clinic, with the goal of providing accessible, timely, and coordinated assessment and intervention services to patients in an interdisciplinary framework. The resident is present in the clinic one day per week and provides assessment and intervention services, along with general consultation to Geriatric Medicine residents, fellows, and attending physicians. Assessment opportunities consist of cognitive screening and rapid neuropsychological assessment with same-day feedback to the veteran and medical team. Brief behavioral interventions are also available.

Community Living Center (CLC): In the CLC, residents gain exposure to assessment and intervention services for (generally) older adults admitted to a post-acute rehabilitation unit known as the Community Living Center. CLC veterans are generally admitted for specific functional needs, often in the context of deconditioning, medical management (e.g., antibiotic treatment, cancer treatment, wound healing), along with other cardiac, pulmonary, or neurologic conditions. The resident will complete brief cognitive/behavioral health screens and focused neuropsychological assessments that meaningfully contribute to the Veteran's rehabilitation and discharge planning. Residents may gain exposure to acute presentations (e.g., delirium, post-intensive care syndrome), and other neurologic and rehabilitation samples (e.g., TBI, stroke). Intervention opportunities are also available, specifically with brief therapy and interventions focused on health behavior change (e.g., smoking cessation, engagement or adherence to rehabilitation recommendations, adjustment to medical illness). Further clinical opportunities may also include consult-liaison assessment/intervention throughout the hospital. Residents are also encouraged to attend a weekly geriatric and rehabilitation didactic when available.

Optional Training Experiences:

Michigan Alzheimer's Disease Center (MADC): The MADC is one of 31 Centers funded by the National Institute on Aging to study age- and disease-related cognitive and functional decline. Residents have the option of seeing patients clinically as a part of the MADC's flagship study known as the University of Michigan Memory in Aging Project (UM-MAP). This study collects annual neurological and neuropsychological data on a cohort of about 400 participants who span the dementia spectrum (i.e., from "normal" cognition to advanced dementia of various etiologies). An increasing number of UM-MAP participants also have biomarker data including blood, genetics, MRI (structural and functional), and PET (amyloid and tau ligands). Residents can gain additional assessment experience with UM-MAP participants, assist in providing feedback to participants and their families, and perform research studies using MADC infrastructure.

Other experiences include the Substance Abuse Clinic and Post Traumatic Clinic, and several clinics at Michigan Medicine (e.g., Cognitive Disorders Clinic, Movement Disorder Clinic, Epilepsy/Wada Clinic, Neurosport Clinic, ADHD Clinic, and ASD Clinic).

Adult Neuropsychology – Research Experiences

Applicants with strong research interests are encouraged to apply, as residents are expected to participate in the development and execution of research in collaboration with neuropsychology faculty. Residents will be selected according to program availability and their research areas of interest to focus in the following areas of research:

Michigan Medicine

Adult Neuromedical: (1 Position Available for 2021)

The Neuropsychology Program has strong ties with many departments in the Medical School including Neurology, Neurosurgery, Oncology, Psychiatry, Cardiology and Obstetrics/Gynecology. The Neuromedical research emphasis is on interdisciplinary research with a translational focus. The opportunities for training will be based upon interest and available research projects at the time of residency. The primary Neuropsychology professional mentor is Kristen Votruba, Ph.D., ABPP-CN, with additional mentorship provided by training faculty as aligned with the resident's interests.

Below is a sample of research projects that are currently ongoing:

- In conjunction with the Departments of Oncology and Internal Medicine, research is exploring the longitudinal cognitive and psychological changes associated with bone marrow transplant in order to tailor treatment planning and identify risk factors associated with cognitive decline. This work includes clinical trial investigations of various therapeutic agents, outcomes associated with differing treatment modalities, and effect of nutrition and fitness on improvement after cancer. Research is led by Kristen Votruba, Ph.D., ABPP-CN.
- As part of the UM STIM Program (Surgical Therapies to Improve Movement), research is aimed at developing models to improve successful outcomes and identify risk of cognitive or functional declines after Deep Brain Stimulation Surgery in patients with Movement Disorders. Research is led by Carol Persad, Ph.D., ABPP-CN.
- In collaboration with the Departments of Neurology and Neurosurgery, research is investigating the cognitive correlates of epilepsy and outcome of surgery. Research is led by Elise Hodges, Ph.D., David Marshall, Ph.D., ABPP-CN.
- In collaboration with the Departments of Neurology and Internal Medicine, the Neuropsychology Program is conducting evaluations of patients with metabolic syndrome and obesity prior to and throughout the course of different treatment approaches in order to better understand cognitive and behavioral change in these patients over time. Research is led by Kristen Votruba, Ph.D., ABPP-CN.
- In conjunction with Ob/Gyn and Psychiatry, research is underway to understand cognitive and neuroactivation changes associated with estrogen replacement

therapy (ERT) in peri- and post-menopausal women. Neuropsychological outcomes, PET and fMRI data are combined to assess risks and benefits of ERT in this population. Research is led by Carol Persad, Ph.D., ABPP-CN.

- Since the COVID-19 pandemic, faculty, staff, and residents have created a task force to collect data and develop projects related to the feasibility and validation of Teleneuropsychology (TeleNP). Current projects include evaluations of the impact of TeleNP on diagnostic decision-making and confidence, patient perceptions of TeleNP, and a national survey of TeleNP and decision-making among neuropsychologists. Research is led by Annalise Rahman-Filipiak, Ph.D.

Geriatric/Dementia: (2 Positions Available for 2021)

The Neuropsychology Section maintains a strong research program related to the early identification of neurodegenerative disorders. The program is closely related to the Michigan Alzheimer's Disease Center (MADC) housed in the same building as the Neuropsychology Section. The MADC aims to: a) conduct and promote research on Alzheimer's disease and related disorders; b) enhance the clinical care of patients and families affected by Alzheimer's disease and related dementias; and c) provide information and education on Alzheimer's disease and related disorders. In close collaboration with the MADC, the Neuropsychology Section conducts innovative memory and aging research to enhance our understanding of a) biomarkers used for early detection; b) disease modifying treatments; c) basic disease mechanisms in AD and other dementias; and d) effective strategies to help individuals with memory loss and their families. Several large databases provide numerous opportunities for research and provide well characterized data for postdoctoral resident and faculty-initiated research projects. Recent and ongoing projects in the Neuropsychology Section include:

- Comparisons of healthy controls, MCI, Alzheimer's, and other dementias on:
- Techniques to enhance driving using the Section's driving simulator
- Simple and complex walking conditions involving increasing cognitive load using the Section's Mobility Laboratory
- The relationship of neuropsychological performance and positron emission tomography measures
- Caregiver burden and service utilization
- The utility of neuroimaging, ERP measures, and computer-based neuropsychological screening in the early identification of cognitive difficulties in community dwelling African Americans.

- The effects of cognitively oriented treatments (e.g., Cognitive Rehabilitation, Cognitive training) and/or non-invasive brain stimulation on cognition and functional connectivity in older adults.
- Alzheimer's Disease biomarker identification and risk communication.
- Health behavior change following diagnostic feedback and/or biomarker disclosure in racially diverse older adults and their families.

Residents also participate regularly in scholarly publication related to aging-related topics such as healthy cognitive aging, differences in age of onset and prognosis of neurological and psychiatric disorders, and the interaction between cognitive and psychological change in older individuals. Research in aging / geriatrics is led by Linas Bieliauskas, Ph.D., ABPP, Bruno Giordani, Ph.D., Benjamin M. Hampstead, Ph.D., ABPP-CN, and Annalise-Rahman-Filipiak, Ph.D., with additional projects led by other faculty members.

Mood Disorders/Bipolar Disorder: (Not recruiting for 2021):

Residents with this research emphasis will receive partial support through the Heinz C. Prechter Bipolar Research Program (<https://medicine.umich.edu/dept/prechter-program>) and research will focus on the clinical neuropsychology of bipolar illness and other mood disorders. The Longitudinal Study of Bipolar Disorder ascertains, evaluates, and follows over 1300 individuals with Bipolar Disorder or other conditions. The resident will participate in diagnostic interviews including writing psychiatric summary reports and other related activities to facilitate research in bipolar illness, including generation of and assistance with scientific posters, papers, grants, and related work. They will also participate in consensus diagnosis meetings. The resident will have access to the large longitudinal database to pursue their own research of interest. The resident will also assist in the training and supervision of neuropsychology research associates and other trainees working on bipolar and related projects as well as supervision of doctoral-level practicum students. This research is led by David Marshall, Ph.D., ABPP-CN and Kelly Ryan, Ph.D., ABPP-CN.

Current projects of bipolar disorder include:

- The longitudinal trajectories of cognitive functioning
- The influence of psychiatric and medical comorbidities on cognitive performance
- Neuropsychological aspects of certain features that influence mood disorders (e.g., substance use, trauma, etc.)
- Using novel-technologies to capture real-time assessment of mood and cognition

Prior projects completed by residents working with this team have included:

- Investigations of the influence of personality, comorbid diagnoses, and cardiovascular risk factors on neuropsychological outcomes
- The role of cognitive reserve in bipolar illness
- Discrimination of mood disorders based on neuropsychological task performance
- Performance validity testing among individuals with various affective disorders.

VA Ann Arbor Healthcare System

Adult/Geriatric Neuropsychology: (2 Positions Available for 2020)

Academic track:

Residents can participate in ongoing federally funded research studying the effects of cognitively oriented treatments (e.g., Cognitive Rehabilitation, Cognitive training) and/or non-invasive brain stimulation on cognition and functional connectivity in older adults across the dementia spectrum. Residents will have access to a growing database of neuropsychological and neuroimaging data (both structural and functional MRI; amyloid and tau PET data collection began in Fall 2018). Opportunities for both prospective and retrospective neuromodulation and neuroimaging work are available and will be developed based on mutual interests. Residents will be expected to present research at national or international meetings and to publish study results. The primary supervisor is Benjamin M. Hampstead, Ph.D., ABPP-CN.

Generalist track:

Residents can participate in neuropsychological research that is more general in nature. In recent years, this has included studies evaluating factors predicting cognitive performance in polytrauma, psychometrics, and sleep. Additional studies have focused in geriatric rehabilitation. Specifically, studies have broadly focused on various rehabilitation outcomes in hospitalized older adults, including the prediction of functional status, level of care needs, and falls. Primary supervisors include Robert Spencer, Ph.D., Julija Stelmokas, Psy.D., ABPP-CN, and Michael Ransom, Ph.D.

Pediatric Neuropsychology - Clinical Training Experiences

General Neuropsychology Clinic: The Pediatric Neuropsychology resident conducts outpatient evaluations for children and adolescents with a wide array of presenting cognitive and behavioral challenges. The most common referrals include children and adolescents with neurodevelopmental disorders, including learning disorders, attention-deficit/hyperactivity disorder (ADHD), and autism spectrum disorder as well as medical diagnoses including epilepsy, congenital heart disease, hematological/oncological conditions, genetic syndromes, sleep disorders, and psychiatric illness. A psychometrist model is used for the majority of the assessments, with the resident responsible for interviewing, interpreting, writing clinical reports, and providing feedback. Residents also provide inpatient consultation services on a rotating basis. One of the goals of this program is to ensure that all residents gain experience with patients across the entire lifespan. As such, all Michigan Medicine residents will complete a 4-month experience that involves assessment of adult and geriatric patients.

Postdoctoral residents regularly staff interdisciplinary clinics with medical residents and attending medical staff. Experiences for pediatric residents are offered in Autism Spectrum Disorder Clinic, Multidisciplinary Developmental Evaluation Clinic, Epilepsy Clinic, General Neurology Clinic, and Hematology/Oncology Long Term Follow-Up Clinic. Experiences include integration of neuropsychological assessment data with neurological and medical evaluations of patients and discussion of the case with attending staff.

Primary Clinic Experiences:

ASD Clinic: This weekly clinic conducts diagnostic evaluations of children and adolescents ages 5 and older with autistic spectrum disorders (ASD) as well as comorbid psychiatric and behavioral disorders. Assessments follow a comprehensive multidisciplinary team approach consisting of a neuropsychological evaluation, social work assessment, speech and language evaluation, and full medical/psychiatric examination.

Multidisciplinary Developmental Evaluation Clinic (MDEC): This weekly clinic conducts diagnostic evaluations of children ages five and under with developmental concerns, including autism spectrum disorders (ASD). Assessments follow a multi-disciplinary team approach consisting of clinical interview and play observation with neuropsychology, speech and language evaluation, and medical/neurological examination. Some patients are referred for further comprehensive developmental evaluation including ADOS-2 within the neuropsychology section.

Hematology/Oncology Clinic: Residents may participate in the weekly pediatric hematology/oncology Long Term Follow-Up clinic for children and young adults who are survivors of childhood cancer (e.g. ALL, AML, brain tumor, sickle cell disease). The neuropsychologist provides brief consultation with the patient in conjunction with the team educational specialist to review educational concerns and provide input regarding neuropsychological evaluation and/or follow-up on results from recently completed neuropsychological evaluation if available.

Epilepsy Clinic: Residents may participate in the weekly epilepsy conference for pre-and post-surgical consultation. The multidisciplinary team consists of neuropsychology, neurosurgery, neuroradiology, social work, and speech and language pathology. Opportunities for observation of Wada testing are also available.

General Neurology Clinic: Residents may participate in a weekly pediatric neurology clinic to observe neurological examination and treatment of a variety of neurological disorders (i.e. headaches, seizure disorder, global developmental delay, neuromuscular disorders).

Pediatric Neuropsychology – Research Experiences

Pediatric Neuropsychology: (1 Position Available for 2021)

Applicants with strong research interests are encouraged to apply, as the resident is expected to participate in the development and execution of research in collaboration with the pediatric neuropsychology faculty. Current research in the division involves multidisciplinary projects focused on autism spectrum disorder, oncology, cardiology, and sleep disordered breathing in children. Primary research mentors are Kimberley Heinrich, Ph.D. (heinrikp@med.umich.edu), Elise Hodges, Ph.D. (ekhodges@med.umich.edu), and Annette Richard, Ph.D., ABPP-CN (annricha@med.umich.edu), with additional research by Kaitlin Oswald, Ph.D., Bruno Giordani, Ph.D., and Carol Persad, Ph.D., ABPP-CN. Interested applicants are encouraged to contact Drs. Heinrich, Hodges, and Richard for more specific information. Below is a sample of research projects that are currently ongoing:

- The characterization of risk and resilience factors in children who have undergone Bone Marrow Transplantation (BMT). The project is being conducted in collaboration with Pediatric Oncology. Primary research mentors Kimberley Heinrich, Ph.D. and Elise Hodges, Ph.D.
- Neuropsychological correlates in HIV and malaria in African children. Primary research mentor for this project is Bruno Giordani, Ph.D.
- The neurodevelopmental outcome of children with a history of congenital heart disease. Projects are being conducted in collaboration with the Congenital Heart Center Neurodevelopmental Follow-Up Clinic, which includes Pediatric Cardiology and Pediatric Psychology. Primary research mentor is Kimberley Heinrich, Ph.D. with additional mentorship provided by Bruno Giordani, Ph.D., Elise Hodges, Ph.D., and Carol Persad, Ph.D., ABPP-CN.
- Neurodevelopmental outcomes of intensive speech therapy intervention in young children with ASD. Primary research mentor is Annette Richard, Ph.D., ABPP-CN
- Predictors and impacts of educational service disparities in the context of the COVID-19 pandemic. Primary research mentor is Annette Richard, Ph.D., ABPP-CN.
- Neuropsychological Profiles of Developmental Disorders. We are currently taking advantage of a large dataset examining profiles for children who have been referred for consensus diagnosis of ADHD and ASD. We are particularly interested in neuropsychological profiles in these groups as well as influential covariates. Primary mentors on this project are Elise Hodges, Ph.D., Kimberley Heinrich Ph.D., and Annette Richard, Ph.D., ABPP-CN.

Current Residents

Residents beginning their Residency in 2019

- **Bryant Duda, Ph.D.**: Michigan Medicine-Geriatric; University of Georgia (Ph.D.); Dartmouth Medical Center (Internship)
- **Anson Kairys, Ph.D.**: Michigan Medicine-Geriatric; University of Colorado Denver (Ph.D.); Rush University Medical Center (Internship)
- **Ketrin Lengu, Ph.D.**: VAAAHS-TBI/Geriatric Neuropsychology; Eastern Michigan University (Ph.D.); VA Ann Arbor (Internship)
- **Spencer Liebel, Ph.D.**: Michigan Medicine-Pediatric/Lifespan; University of Georgia (Ph.D.); Milwaukee VA (Internship)
- **Kyler Mulhauser, Ph.D.**: Michigan Medicine-Neuromedical; Saint Louis University (Ph.D.); University of Alabama Birmingham/VA Consortium (Internship)
- **Amber Rochette, Ph.D.**: VA-TBI/Geriatric Neuropsychology; Kent State University (Ph.D.); VA Ann Arbor (Internship)

Residents beginning their Residency in 2020

- **Elizabeth Campbell, Psy.D.**: VAAAHS: Wright State University (Psy.D), Veterans Affairs Palo Alto Health Care System (Internship)
- **Anthony Correro, Ph.D.**: VAAAHS; Marquette University (Ph.D.), VA Boston Healthcare System (Internship)
- **Tobin Ehrlich, Ph.D.**: Michigan Medicine Mood Disorders; Palo Alto University (Ph.D.), Central Texas Veterans Health Care System (Internship)
- **Taylor Greif, Ph.D.**: Michigan Medicine - Neuromedical; Saint Louis University (Ph.D.); University of Oklahoma Health Sciences Center (OUHSC) / Oklahoma City VA Consortium (Internship)
- **Lindsay Katz, Psy.D.**: Michigan Medicine Pediatric Neuropsychology; Roosevelt University (Psy.D.); AMITA Health Alexian Brothers Women and Children's Hospital (Internship)

Principal Training Faculty

Kenneth Adams, Ph.D., ABPP-CN, Professor of Psychology, Department of Psychiatry; Professor of Psychology, College of Literature, Science, and the Arts. Dr. Adams completed his undergraduate degree and earned his Ph.D. in psychology from Wayne State University. Internship was completed at Lafayette Clinic (Detroit Medical Center). Dr. Adams's clinical interests include abnormal aging, long term effects of medical illness on neuropsychological and emotional adaptation, cerebral trauma, and effects of neurotoxic exposures. Research interests include methodology in brain-behavior studies, neuroimaging in studies of neuropsychological issues, long term effects of alcohol and substance abuse, and child neuropsychological risk factors and their effect on adult outcomes. Email: kmadams@umich.edu.

Linas Bieliauskas, Ph.D., ABPP-CN, Professor of Psychology, Department of Psychiatry; Professor, Department of Psychology. Dr. Bieliauskas completed his undergraduate degree at Xavier University and earned his Ph.D. from Ohio University. Internship was completed at University of Florida. Dr. Bieliauskas' clinical interests include general neuropsychological evaluation of adult disorders, closed head injury, dementing disorders, and Parkinson disease. His research interests include cognitive and personality changes with normal and abnormal aging, psychometric indicators of cognitive disorders, depression and dementia, neuropsychological predictors of critical life tasks, and cognitive impact of chronic disease. Email: linas@umich.edu.

Henry "Gus" Buchtel, Ph.D., Associate Professor (Emeritus) in the Neuropsychology Program, Department of Psychiatry. Dr. Buchtel completed his undergraduate degree at Dartmouth College and earned his Ph.D. from McGill University. Clinical interests include epilepsy and epilepsy surgery, dementia, and amnesic disorders. Research interests include brain and behavior relationships, language abilities after anterior temporal lobectomy, attention, consciousness, frontal lobe functions, and brain organization of face recognition. Email: gusb@umich.edu

Cynthia Burton, Ph.D., Clinical Lecturer in the Neuropsychology Program, Department of Psychiatry. Dr. Burton completed her undergraduate degree in psychology at the University of California, San Diego and her Ph.D. in clinical psychology (neuropsychology emphasis) at the SDSU/UCSD Joint Doctoral Program in Clinical Psychology. She completed an APA accredited internship in clinical psychology at the VAAHS and an APA accredited postdoctoral fellowship in clinical neuropsychology and clinical psychology at the University of Michigan. Dr. Burton's clinical interests include neuropsychological assessment of adults with neurological and psychiatric disorders, with a particular interest in dementia and severe mental illness (schizophrenia and bipolar disorder). Her primary research interests involve

cognitive remediation for individuals with schizophrenia, and improving cognition and everyday functioning among those with mental health conditions. Historically her research has focused on skills training, with more recent expansion to include non-invasive brain stimulation and computerized cognitive training. Email: czburton@umich.edu

Bruno Giordani, Ph.D., Professor (tenured) of Psychiatry, Neurology, and Psychology, and School of Nursing; Chief Psychologist, Department of Psychiatry; Associate Director for the NIH/NIA funded Michigan Alzheimer's Disease Research Center. Dr. Giordani is a Fellow in Division 40 (Clinical Neuropsychology) and Division 12 (Society of Clinical Psychology) of the American Psychological Association. He completed his undergraduate degree from Dartmouth College and earned his Ph.D. in clinical psychology and psychophysiology from the University of Virginia. He completed an APA accredited internship in clinical psychology and a NIH Training Fellowship in clinical neuropsychology and neuroscience at the University of Virginia and a Health Science Training Fellowship at the University of Michigan and VAAHS. He completed an APA accredited Postdoctoral Fellowship in Clinical and Research Neuropsychology at the University of Michigan and VAAHS. Clinical interests include neuropsychological evaluation across the lifespan with emphasis on impairments associated with neurological and medical disorders and sports injuries. Research interests include development of neuropsychological and behavioral assessment techniques in cross-cultural settings including cognitive enhancement through pharmacological and non-pharmacological methods and identification of early cognitive deficits as revealed by neuropsychological, electrophysiological, and neuroimaging modalities. Currently funded research includes studies in imaging, driving, child and adult HIV, validation of computer-based cognitive assessment, early identification of community-dwelling individuals with cognitive decline using electrophysiological and computer-based testing, and studies of cognitive and behavioral factors in hearing loss and cardiovascular disease. Email: giordani@umich.edu

Benjamin Hampstead, Ph.D., ABPP-CN, Dr. Hampstead is a board-certified Clinical Neuropsychologist who earned his PhD in Clinical Psychology (Neuropsychology emphasis) from Drexel University. He completed his internship and post-doctoral fellowship at Emory University. He is a tenured Professor in Psychiatry at the University of Michigan, Staff Neuropsychologist in the VA Ann Arbor Healthcare System, and both Clinical Core Leader and Neuroimaging Core co-leader of the NIA funded Michigan Alzheimer's Disease Research Center. Dr. Hampstead's research focuses on the early detection of cognitive decline arising from aging and neurodegenerative diseases as well as non-pharmacologic approaches to maximize cognitive functioning in older adults. He uses techniques like cognitive rehabilitation and non-invasive brain stimulation to enhance cognition and everyday functioning, typically within the context of a randomized controlled trial. Dr. Hampstead integrates these techniques with functional and structural neuroimaging to predict treatment response, identify neuroplastic changes following treatment, and plan/develop new interventions. This work now includes multiple positron emission tomography (PET)

ligands that characterize amyloid and tau as well as cholinergic integrity. Examples of ongoing studies include: 1) the synergistic effects of combined cognitive training and high definition transcranial direct current stimulation (HD-tDCS) in patients with mild cognitive impairment, 2) HD-tDCS dose-response relationships as measured via cognition and functional connectivity in patients with MCI and dementia of the Alzheimer's type and whether these effects are mediated by biomarker status, 3) targeted neuromodulation of cholinergic functioning in Dementia with Lewy Bodies. Funding has come from, or is currently provided by the Department of Veterans Affairs, National Institute on Aging, National Institute of Mental Health, and the Michigan Alzheimer's Disease Research Center.

Dr. Hampstead also directs the *Research Program on Cognition and Neuromodulation Based Interventions* (RP-CNBI), the mission of which is to identify and provide effective treatments for those suffering from neurologic injury and disease. The RP-CNBI is uniquely poised to provide tangible next steps for the "what now" question that emerges following neuropsychological assessment. Trainees are able to obtain hands on experience integrating clinical data (neuropsychological, MRI, PET, CSF results) to develop targeted treatment plans that address patient-specific needs. Examples include interventions for cognitive deficits arising from post-anoxic leukoencephalopathy, primary progressive aphasia, posterior cortical atrophy, and Dementia with Lewy Bodies. The RP-CNBI supports a growing list of observational and interventional studies and retains access to hundreds of MRI scans and associated neuropsychological data.

Kimberley Heinrich, Ph.D., Clinical Assistant Professor in the Neuropsychology Program, Department of Psychiatry. Dr. Heinrich completed her undergraduate degree in biology and psychology at Michigan State University and earned her Ph.D. in clinical psychology from Central Michigan University. She completed an American Psychological Association (APA) accredited pre-doctoral internship in clinical psychology (neuropsychology track) at University of Florida Health Science Center, and then went on to complete an APA accredited postdoctoral fellowship in clinical neuropsychology at the University of

Michigan. Dr. Heinrich's clinical interests include neuropsychological and psychological evaluation in pediatric populations, particularly in children with neurodevelopmental disorders, cancer, and congenital heart disease. Her primary areas of research include investigating neurodevelopmental outcome in children with a history of congenital and/or acquired medical conditions. She is also interested in investigating neuropsychological and psychosocial outcomes of children with developmental disorders. Email: heinrikp@umich.edu

Elise Hodges, Ph.D., Clinical Associate Professor in the Neuropsychology Program, Department of Psychiatry; Clinical Director of the Neuropsychology Program. Dr. Hodges completed her undergraduate degree in psychology at the University of Michigan and earned her Ph.D. in clinical psychology with a neuropsychology specialty from Wayne

State University. She completed an American Psychological Association (APA) accredited pre-doctoral internship in clinical psychology at the Ann Arbor Veteran's Administration Healthcare System and then completed an APA accredited postdoctoral fellowship in clinical neuropsychology at the University of Michigan. Clinical interests include pediatric, adolescent, and adult neuropsychological assessment, ADHD, Learning Disorders, developmental disorders, and neuropsychological sequelae of medical conditions across the lifespan. Email: ekhodges@umich.edu

Amanda Cook Maher, Ph.D., Clinical Assistant Professor, Neuropsychology Program, Department of Psychiatry. Dr. Maher completed her undergraduate degree in neuroscience at Middlebury College in Middlebury, VT and earned her Ph.D. in clinical psychology with a focus in neuropsychology at Northwestern University Feinberg School of Medicine. She completed an APA accredited internship in clinical psychology (neuropsychology track) at Emory University School of Medicine, and an APA accredited post-doctoral fellowship in neuropsychology at the University of Michigan. Dr. Maher's clinical interests include the neuropsychological evaluation of older adults, with a particular interest in neurodegenerative disease. Her research interests include successful cognitive aging (e.g., 'SuperAgers'), driving behavior in older adults, and early detection of Alzheimer's disease and related disorders. Email: amhco@med.umich.edu

David Marshall, Ph.D., ABPP-CN, Clinical Assistant Professor in the Neuropsychology Program, Department of Psychiatry. Dr. Marshall completed his undergraduate degree at Michigan State University and earned his Ph.D. in clinical psychology with a neuropsychology specialty from the Pacific Graduate School of Psychology at Palo Alto University. He completed an APA accredited internship in clinical psychology (neuropsychology track) at Baylor College of Medicine and an APA accredited postdoctoral fellowship in neuropsychology at the University of Michigan. Dr. Marshall's clinical interests include neuropsychological evaluation in adolescents and adults with neurological and psychiatric disorders. His research interests include investigating features that influence mood disorders as well as cognitive correlates of epilepsy and surgery outcomes. Email: davimars@med.umich.edu

Kaitlin Oswald, Ph.D., Clinical Assistant Professor in Neuropsychology Program, Department of Psychiatry. Dr. Oswald completed her undergraduate degree in neuroscience and psychology at Cedar Crest College and earned her Ph.D. in clinical psychology from Eastern Michigan University. She completed an APA accredited internship in clinical psychology at the University of Mississippi Medical Center, and an APA accredited postdoctoral fellowship in pediatric neuropsychology at the University of Michigan. Dr. Oswald's clinical interests include neuropsychological evaluation of pediatric populations, including children with neurodevelopmental disorders and medical conditions including cancer, epilepsy, and congenital heart disease. Primary research areas include neurocognitive outcomes in

children with cancer. She is also interested in examining the clinical utility and outcomes of neuropsychological services in pediatric populations. Email: kaitliao@umich.edu

Carol Persad, Ph.D., ABPP-CN, Clinical Professor, Department of Psychiatry; Director, Neuropsychology Program; Director, University Center for Language and Literacy, Mary A. Rackham Institute. Dr. Persad completed her undergraduate degree in psychology at the University of Toronto and earned her Ph.D. in clinical psychology from Michigan State University. She completed an APA accredited internship at Henry Ford Hospital and a postdoctoral fellowship in clinical neuropsychology at the University of Michigan. Dr. Persad's clinical practice is across the lifespan with a particular interest in movement disorders and dementia. She is the lead neuropsychologist for the multidisciplinary Deep Brain stimulation program. Her research interests include the cognitive and behavioral impact of deep brain stimulation in Parkinson's disease, the relationship between cognition and mobility in older adults including how changes in driving behavior may be an early indicator of dementia, and neuroendocrine factors and cognition. Email: cpersad@umich.edu

Annalise Rahman-Filipiak, Ph.D., Assistant Professor in the Neuropsychology Program, Department of Psychiatry and Michigan Alzheimer's Disease Center; Faculty in the Clinical Core of the Michigan Alzheimer's Disease Research Center. Dr. Rahman-Filipiak completed her undergraduate degree in biology, psychology, and neuroscience at the College of Charleston in South Carolina and earned her Ph.D. in clinical psychology from Wayne State University with an additional certificate in Aging & Urban Health from the Wayne State University Institute of Gerontology. She completed an APA accredited internship in clinical psychology (geropsychology / neuropsychology track) and an APA-accredited postdoctoral fellowship in clinical neuropsychology at the Michigan Medicine / VAAHS Consortium. Dr. Rahman-Filipiak's clinical interests include neuropsychological evaluation of older adults with Mild Cognitive Impairment and dementias and functional and decision-making capacity assessment. Dr. Rahman-Filipiak currently co-leads the Michigan Brain Health for Aging Independently (BRAIN) Clinic, an interdisciplinary collaboration with the Department of Geriatrics focused on providing rapid assessment and treatment of individuals with suspected mild cognitive impairment. Primary research interests include the impact of neuropsychological feedback, disclosure of Alzheimer's disease biomarkers and associated risk for Dementia – Alzheimer's Type in minority populations, early detection of Alzheimer's disease through integration of neuropsychological findings, and teleneuropsychological practice. Email: rahmanam@med.umich.edu.

Michael Ransom, Ph.D., Staff psychologist in the Neuropsychology Section at the Ann Arbor VA. He received his Ph.D. from the University of North Dakota and completed his postdoctoral training in Clinical and Research Neuropsychology at the University of Michigan. His primary clinical interests include the neuropsychology of mood disorders, dementia, traumatic brain injury, and sports concussion. His research activities have focused on cognitive functioning (particularly executive functioning) in individuals with mood disorders, with a focus on

depression. Email: Michael.Ransom@va.gov

Annette Richard, Ph.D., ABPP-CN, Clinical Assistant Professor in the Neuropsychology Program, Department of Psychiatry. Dr. Richard completed her undergraduate degree at Dartmouth College and her Ph.D. in clinical psychology from Eastern Michigan University. She completed an APA accredited internship in clinical psychology (pediatric neuropsychology track) at Henry Ford Health System, and an APA accredited postdoctoral fellowship in clinical neuropsychology at the University of Michigan. Dr. Richard's clinical interests include neuropsychological evaluation in children with neurodevelopmental

disorders, medical conditions, and psychiatric disorders. Her primary research interests include cognitive and neurophysiological functioning in autism spectrum disorder and other neurodevelopmental disorders, as well as neuropsychological outcomes of children with medical conditions. Email: annricha@med.umich.edu

Kelly Ryan, Ph.D., ABPP-CN, Clinical Associate Professor in the Neuropsychology Program, Department of Psychiatry. Dr. Ryan completed her undergraduate degree at the University of Michigan and earned her Ph.D. in clinical psychology from Wayne State University. She completed an APA accredited internship in clinical psychology (neuropsychology track) at the Ann Arbor Veterans Administration and an APA accredited postdoctoral fellowship in clinical neuropsychology at the University of Michigan. Her clinical interests include adult neuropsychological assessment, dementia, and other neurological and

psychiatric disorders. Research interests include the use of neuropsychological tests to inform functional outcomes among medical and psychiatric populations, impact of neuropsychological functioning on patient and caregiver well-being, and cognitive, behavioral, and functional decline in aging. She also is interested in using technology to capture cognitive and functional shifts in mental illness. Email: karyan@umich.edu

Robert Spencer, Ph.D., Chief of the Neuropsychology Section at the Ann Arbor VA. Dr. Spencer completed his doctoral degree in Behavioral Medicine / Clinical Psychology at the University of Maryland, Baltimore County. He completed an APA approved pre-doctoral internship and postdoctoral training in neuropsychology at the Ann Arbor VA. His clinical foci are in neuropsychological assessment, traumatic brain injury, and delivering timely and relevant feedback to patients and providers. His research examines issues related to assessment, traumatic brain injuries, and measurement theory. Email: Robert.spencer2@va.gov.

Julija Stelmokas, Psy.D., ABPP-CN, Staff Psychologist in the Neuropsychology Service at the Ann Arbor VA and Research Scientist at the VAAHS Geriatric Research, Education and Clinical Centers (GRECC). She earned a Psy.D. from Pacific University (neuropsychology track) and completed internship and post-doctoral training in clinical neuropsychology at the VAAHS/Michigan Medicine Consortium. She completed an Advanced Geriatrics Fellowship through the GRECC at the VAAHS. Clinical interests include geriatric neuropsychology, rehabilitation, positive psychology, and utilization of motivational interviewing in neuropsychological assessment and mental health interventions. Her research focuses on cognitive and affective predictors of post-acute care outcomes, including rehabilitation engagement, falls, functional status, capacity, and the clinical utility of cognitive screening in hospitalized older adults. Email: julija.stelmokas@va.gov.

Kristen Votruba, Ph.D., ABPP-CN, Clinical Associate Professor in the Neuropsychology Program, Department of Psychiatry; Neuropsychology Training Director at Michigan Medicine. Dr. Votruba completed her undergraduate degree in biopsychology at the University of Michigan and earned her Ph.D. in clinical psychology with a focus in neuropsychology from Wayne State University. She completed an American Psychological Association (APA) accredited internship in clinical psychology (neuropsychology track) at the Ann Arbor Veterans Administration, and an APA accredited postdoctoral fellowship in clinical neuropsychology at the University of Michigan. Dr. Votruba's clinical interests include neuropsychological evaluation across the life span, particularly in individuals with neurodegenerative disorders, traumatic brain injury, stroke, and cancer. Her primary areas of research include investigating cognitive and psychological outcomes in cancer and obesity. Current funded projects include clinical trials investigating therapeutic agents in cancer that may affect processing speed or memory consolidation, the utility of nutrition and fitness in cancer outcomes, and the effect of obesity and associated medical comorbidities on neurological outcomes. Email: kvotruba@umich.edu

CLINICAL NEUROPSYCHOLOGY APPLICATION PROCESS

The application deadline for the neuropsychology residency is **December 1, 2020**.

Submission of materials is done electronically:

<https://ummentalhealth.info/applications/postdoc/>

Completed materials should include:

- 1) Application
- 2) Letter of interest/statement of future goals
- 3) Graduate school transcript
- 4) CV
- 5) Letter from DCT (this is separate from the 3 letters of recommendation)
- 6) 3 letters of recommendation

- We will not be participating in the 2020 APPCN match
- Applicants may express interest in more than one of the positions
- After a review of applications, individuals will be contacted for interview.
- Candidate Interviews take place in December and January via video/voice call

For further information please contact the Michigan Medicine Neuropsychology Program Training Director, Kristen Votruba, Ph.D., ABPP-CN at kvotruba@med.umich.edu or 734-936-6617.

ANN ARBOR LIFE AND COMMUNITY

Michigan Medicine and VA Ann Arbor Healthcare System are located within the mid-sized city of Ann Arbor. The 2010 Census recorded its population to be 113,934, making it the sixth largest city in Michigan. Ann Arbor is renowned for its cultural offerings and is home to an avid base of sport enthusiasts. Ann Arbor has you covered year-round, whether you enjoy arts, sports or recreational activities, shopping, festivals,

casual or fine dining, family-friendly activities, or nightlife. Ann Arbor is also home to award winning public schools and higher learning universities and colleges. For further information please visit www.visitann Arbor.org.
