

Cooper Genomics Pricing Sheet

Cooper Genomics offers two testing plans:

- Single Cycle Plan (pricing is per embryo and per cycle)
- Multicycle Plan (8 embryos tested within 12 months)

The plan is typically \$350 per embryo if pricing individually. There are reduced cost if doing multi cycle plans. Please contact Cooper Genomics at the number below for their exact pricing details.

You have the option to either include or exclude the sex of the embryos on the result report.

- If you choose to include the sex, it will be visible on the report we receive. If you request a copy of the report, you will also be able to see it.
- If you choose to exclude the sex of the embryos from the original report, our office will not know the sex either. You would still be able to get that information in the future, if you ask, we can fax a request for an amended report that includes the embryo sex. Cooper Genomics will always have that information.
- The only way we can guarantee that you won't find out the sex of your embryos is to exclude it from the report. Our staff cannot assume the responsibility to shield that result from you if it is on the report.

There is an additional \$100 courier fee for both testing plans.

Please contact Cooper Genomics for full details of the testing plans and pricing structure. You will need to decide which plan and options best suit your needs.
