Necrotizing Enterocolitis (NEC) is a medical condition where a portion of the bowel dies. It typically occurs in newborns that are either premature or otherwise unwell.

Through the NEC Society, operated by parents impacted by the disease, we applied for funding from the PCORI, to develop a national conference around NEC.

The keynote speakers and diverse faculty have been carefully chosen to highlight the field’s vision and long-term strategies.

Together, we will develop the most impactful and meaningful strategies that will directly benefit our Littlest Victors and their families.

The NEC Symposium provides a platform for multidisciplinary stakeholders – including patient-families – to collaborate on paving our path forward.
