Seeking Program Director for New Internal Medicine Residency Program

Bayhealth Medical Center, based in Dover, DE, is seeking a dynamic leader in the field of Internal Medicine to join us in our efforts to develop a top ranked Internal Medicine Residency Program. Our plan calls for the first Residents to be on site in July 2021. This is an exciting opportunity for a motivated leader to have input and make an impact building a program from the ground up. The program is scheduled to support 15 Internal Medicine residents per year.

Delaware is one of the fastest growing states in the US, and as we grow, we are in the process of developing GME programs to meet future healthcare needs of our communities.

Bayhealth Medical Center is central and southern Delaware's largest healthcare system with two hospitals (one moving to a new hospital building and campus in February 2019), one free-standing ED, numerous ambulatory and outpatient offices, and a medical staff of over 500 physicians. Both hospitals are certified Primary Stroke Centers. Services are available in most specialties, including Neurosurgery, Cardiac Surgery, Interventional and Structural Cardiology.

Delaware is consistently rated as one of the lowest cost of living states in which to either raise a family or retire. Located less than two hours from Washington DC, Baltimore and Philadelphia, the central/southern Delaware area offers affordable living, history and charm. Easy access to both the Delaware and Chesapeake Bays provides limitless recreational opportunities, and the Atlantic Ocean is less than a forty-five minute drive from Dover.
