Harvard-Brigham Research Fellowship in Hospital Medicine

A joint program of Harvard Medical School and Brigham and Women’s Hospital invites applicants for two-year research-oriented fellowships beginning July 1, 2020. Fellows receive an appointment at Harvard Medical School and Brigham and Women’s Hospital and complete an MPH degree at the Harvard T.H. Chan School of Public Health. Fellows participate in weekly research-in-progress seminars alongside fellows from the Harvard General Medicine Fellowship and receive additional training in topics of relevance to hospital medicine research, including inpatient quality improvement, informatics, implementation science, and health policy. Fellows will engage in research projects under the mentorship of experienced research faculty in the Brigham Hospital Medicine Unit and affiliated faculty from Brigham and Women’s Hospital and Harvard. Research areas of special interest include quality improvement, patient-centered outcomes research, safety, and improving the equity and value of inpatient care. Fellows will attend on teaching and non-teaching services at Brigham and Women’s Hospital 8 weeks per year and will receive training and feedback on teaching on the wards, running interdisciplinary teams, and other skills needed for an academic hospitalist career. Applicants must be U.S. BC/BE in internal medicine by July 1 of their first fellowship year.
