Research Interests

As a health services researcher and Family Medicine physician in the Department of Family Medicine at the University of Michigan, my overarching career aim is to improve sexually transmitted infection (STI) prevention and sexual healthcare access for minority and under-resourced populations through innovative evidence-based interventions. Toward this aim, I have studied barriers to STI treatment access and youth's perspectives on STI prevention. I have experience in qualitative and quantitative studies examining: a) the availability of STI screening and expedited partner therapy (EPT), and b) youth perspectives on EPT. I am interested in addressing STI disparities and improving the sexual health outcomes of Black adolescents and young adults in the United States.
