The McGuire Visiting Professorship is a biennial lectureship honoring Dr. McGuire’s legacy in Neurourology and Pelvic Reconstruction. This year, Dr. O. Lenaine Westney, Professor in Department of Urology at the University of Texas MD Anderson Cancer Center, discussed reconstructive aspects of cancer survivorship in two separate lectures.
At Grand Rounds, Dr. Westney's lecture on Genitourinary Dysfunction in the Young Colorectal Cancer Survivors detailed differences in urologic symptomatology from colorectal cancer treatment based on gender and age. The resident team enjoyed dinner with Dr. Westney and Dr. McGuire on Thursday evening.

On Friday morning for the lecture series, Dr. Westney discussed Postprostatectomy Incontinence in African American Men: Analyzing Disparities in Treatment outcomes. Both lectures gave insights on opportunities for improving patient counseling and care through multidisciplinary collaboration in both pre and post cancer treatment.
The lectureship series brought a diverse gathering of neurourologist and pelvic reconstructive attendees. We were thankful for the opportunity to share time with several colleagues who attended the lectureship series including Dr. Oldendorf and Dr. McGuire.

Following Friday morning’s lecture, the NPR faculty & fellows and University of Michigan Residents reviewed challenging cases with Dr. Westney. Topics included Prolapse after cystectomy, individualized care for male incontinence, ureteral reconstruction after radiation, and end stage benign bladder. There was a lively discussion with great feedback from Dr. Westney.

Needless to say, the 2019 McGuire Visiting Professorship was a great success!
